

ASSESS CANDIDATE AND DEVICE SUITABILITY PHASE

VIRTUAL LAUNCH PARTY INSTALL SRW PHASE

PRE-DAY 1 TRAINING PHASE

SECURE REMOTE WORKER Validation Tool

As per the above suggested process map, embedding our Validation Tool into your early phase selection criteria is key to ensuring identification of the right device and candidate, prior-to-hire.

Our Validation Tool automates the assessment of your candidates device and environment, with the pre-defined tests easily configured by your IT team.

These tests include:

- Bandwidth speed
- Hardware specification
- Antivirus & Firewall status
- Operating system version & much more

How does it help?

The Validation Tool will analyze the machine and environment of the potential candidate. It will then report the results back to the organization. Allowing HR to automate this arduous process of BYOD device vetting.

Results?

By including our Validation Tool & SRW Single Click Installer Link within your selection & onboarding processes, alongside following our suggested approach and process map, many of our BPO and CC HR & Recruitment Partners have experienced:

- 1) Reduction in cost-to-hire
- 2) Greater ability to meet head count requirements at any one time
- 3) Substantial reduction in agent drop-outs pre Day 1 start date.

Rule	Status
